TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), TypeScript, SQL, C++
Frameworks: React, FastAPI, TanStack (Query, Router), Node.js, Tailwind CSS
Libraries: SQLAlchemy, Pydantic, REST with FastAPI, Tkinter, ReportLab
Databases: MySQL, MongoDB, PostgreSQL, SQLite
Infra & DevOps: Apache Kafka, Docker, Linux, Git
Data Analysis: Pandas, NumPy, Data Cleaning, EDA, Visualization (Matplotlib, Seaborn)

EXPERIENCE

Envecon — Software Developer | Mumbai, India Aug 2025 – Present

Centrify — Internal Agile Project Management Tool [GitHub](#)

- Developed a full-featured internal mini-Jira covering project planning, sprints, user stories, tasks, and bug tracking with **Role-Based Management** — currently live with **300+ active users** company-wide as the sole developer from ground up.
- Implemented end-to-end **JWT-based Authentication & Authorization** with role-aware access control, securing all API endpoints and enforcing permission boundaries across user roles.
- Built a responsive frontend with **React** and **TanStack Query** for intelligent server-state caching and instant data loads; backend powered by **FastAPI REST** and **MySQL** with optimized relational queries.
- Adopted as the **company's primary project management tool** since launch — the entire organization runs day-to-day operations on this platform, reflecting its production-grade stability and real-world impact.

Supply Chain Management (SCM) Platform

- Developed the **Supplier Onboarding Feature** for managing vendor profiles with tax configurations, service charges, and business details — suppliers are referenced across **Purchase Orders** and **RFQs** platform-wide.
- Built the **Inventory & Parts Management** system for tracking parts across all sites and locations with **serial number tracking**, stock level monitoring, and real-time inventory visibility.
- Engineered **Warehouse Management** with multi-site, multi-warehouse, and sub-location support using **bay-bin-row-tier** positioning, enabling precise inter-location part transfers and audit trails.
- Implemented **Purchase Requisition (PR)** and **Request for Quotation (RFQ)** workflows with item/service-level charges, taxes, and **role-based hierarchical approval** chains; approved PRs auto-generate **Purchase Orders** published to **Apache Kafka** for downstream consumption.

Fleet Management Platform

- Developed **Transport Order** management with origin-to-destination routing, real-time order broadcasting, and a multi-step **driver acceptance & assignment** workflow.
- Integrated **Geoapify Routing API** for intelligent route planning — enforcing **vehicle-size-aware** road filtering (avoiding narrow roads for heavy trucks) and elevation checks to ensure cargo safety.
- Published all transport order events to **Apache Kafka**, enabling real-time consumption by the Fleet mobile application and ensuring **decoupled, resilient** service architecture.

PROJECTS

Facial Recognition Attendance System | Python · OpenCV · Haar Cascade · LBPH · Tkinter

- Engineered a real-time recognition pipeline using **Haar Cascade** for detection and **LBPH** for recognition, achieving **95%+ accuracy** across varying lighting, angles, and environmental conditions.
- Designed a **Tkinter** desktop GUI with role-separated admin/user access for attendance logging; integrated **OpenCV** for preprocessing, **Pandas** for structured data handling, and **NumPy** for numerical operations.
- Added **pyttsx3**-based real-time speech feedback for accessibility; system is modular, device-tested, and production-ready.

E-Contracts — Business Operations & Job Management Platform [GitHub](#) | React · TypeScript · TanStack · FastAPI · MySQL · DaisyUI

- Developing a **3-module role-based platform** with separate dashboards and workflows for **Business**, **Contractor**, and **Workforce** — each with tailored views, permissions, and operational controls.
- Implemented a **quotation bidding system** for large orders enabling multi-contractor quote submission, comparison, and approval; direct assignment for smaller jobs without quotation overhead.
- Engineered the **FastAPI REST** backend using **SQLAlchemy ORM** for structured data access and **FastAPI Filter** library for declarative **dynamic filtering, sorting & search** across large operational datasets.
- Integrated **ReportLab** for programmatic **PDF generation** of Bills, Work Orders, and Contract documents — enabling one-click professional document export within the platform.
- Building **contract lifecycle tracking**, **workforce allocation**, attendance and payment workflows, and operational dashboards using **DaisyUI** components for rapid, consistent UI delivery.

EDUCATION

Vasantdada Patil College of Engineering

Bachelor of Engineering in Information Technology — Mumbai

Aug 2021 – Jun 2025

CERTIFICATIONS

IBM SkillsBuild — Artificial Intelligence & Machine Learning | **CSRBOX** — AIML Certification
